March 2021

#	Date	Track	Topic	Description
1	23.03.2021	Opening Session (Special Guest)	Vision Zero: Global Trends	<p>New time requires new rules. Over the past 10 years, the focus of the world community has shifted: the environment, climate, new technologies and, of course, people. Their health and well-being have become a priority of the new era.</p> <p>The year 2020 revealed shortcomings and gaps in the existing system. We suggest using the experience of the past year as a starting point for growth and development on the way towards creating a new, prosperous society.</p> <p>Labor protection and ensuring the safety of employees — these are the main values of any company, that are now more relevant than ever.</p> <p>During the Opening Session, we invite participants to discuss the key trends in the field of occupational safety and health, which should be the main focus for a successful transformation.</p> <p>Join us. Let's build the future of Vision Zero together.</p>
2	30.03.2021	Digital Transformation	Digital Transformation of HSE (ESH) - current situation	<p>Digital transformation is a process on the agenda of every modern company. Business adapts to the current realities, where all activities, one way or another, are connected with the digital space.</p> <p>While transforming products and services for customers and partners, it is essential for business to transform the processes within the company and involve the entire team in the new approach formation. Globally the task is complex and not fast. Certain difficulties occur in such industry as occupational safety and health. The activities here are carried out by people and works, that are directly related to production processes. They cannot be stopped or experimented with disregarding understanding the causes and the positive economic effect.</p> <p>During the round table we will discuss how such global process can be implemented in life, what steps it consists of and what it is used for. Companies that have successfully implemented projects and have already passed a part of the transformation path will share their experience.</p>

April 2021

#	Date	Track	Topic	Description
1	06.04.2021	Global Dialogue	Happy Vision Zero, guys!	<p>The Vision Zero concept is at the heart of the occupational health and safety management system. This approach can be used in processes of choosing strategies, setting goals and objectives.</p> <p>Our virtual conference is designed to bring together a wide range of professionals to discuss issues related to the safety, health and well-being of employees and employers.</p> <p>Joining the Vision Zero concept does not mean the spontaneous implementation of any activities, but the systematic planning, which must comply with all the principles of the concept.</p> <p>During the session, we will discuss how to formulate a strategy, identify the right goals and aims in order to objectively assess the progress in the most effective way.</p>
2	13.04.2021	Human Capital	Remote employee — part of the team	<p>The health and safety of employees are the priorities of any company.</p> <p>In difficult and critical times, the importance of retaining valuable staff is more relevant than ever. The pandemic left no choice: in many companies employees were forced to switch to remote work. Increasingly, the job description is marked "fully remote job".</p> <p>Although the concept of remote work is not new, it requires particular attention to some aspects of the work organization: setting a daily routine, maintaining communication and ensuring the well-being of employees. All these factors affect the efficiency of employees.</p> <p>During this session, we invite companies to share their experience: how to organize properly the workflow, work space, eliminate the risk of accidents and provide remote employees with safe working conditions.</p>
3	20.04.2021	Environment & Sustainable Development	Environmental safety — priority for business development	<p>More than 20 years ago, the UN proposed to focus the attention of the international community on natural resource conservation in the whole world.</p> <p>More and more attention is paid to ensuring the environmental safety of production processes. New mechanisms and institutions of interaction between the business community at both the international and national levels are being formed.</p> <p>Now it is no longer possible to limit ourselves to the implementation of legislative requirements. We need progressive approach, that would take into account current trends. The international agenda requires active actions to develop and conduct sustainable business.</p> <p>During the round table, participants will consider the existing request for improving the effectiveness of the environmental management system and discuss the role of environmental aspects in the planning of the company's activities.</p>

4	27.04.2021	Health & Culture of Well-Being	Simple steps towards health culture	<p>"Culture of health". What is it? What is it for? This is a very complex concept that requires taking into account many aspects of the work and lifestyle of employees.</p> <p>Currently, leading experts realise that there is a problem of improving the culture of health and safety of employees in companies.</p> <p>Many socially responsible enterprises are already implementing preventive measures to maintain the health of their employees. However, the question arises as to whether they are effective and commensurate with the staff workload. Physical exercises are definitely a good thing. However, the prevention of diseases and injuries should be diverse and holistic.</p> <p>The key to solving this issue is the implementation of comprehensive measures aimed at maintaining the health of employees. Planned investments in creating conditions that promote the well-being of employees are recaptured in a short time and bring economic and trend benefits to the company.</p> <p>During the expert session, we will consider practical tools and mechanisms for their implementation in the company's activities to effectively improve the health culture of employees.</p>
---	------------	--------------------------------	-------------------------------------	---

May 2021

#	Date	Track	Topic	Description
1	05.05.2021	Safety & Risk Management	The Invisible Heroes: how HSE-specialists deal with the pandemic	<p>From the very beginning of the pandemic, occupational health and safety specialists faced with new realities, and we all had to stand "on the front line" in the fight against COVID-19. The issue of developing special measures to protect millions of workers has become acute.</p> <p>The international dialogue is dedicated to the combating of outbreaks of infectious diseases in the workplace, with special attention to the activities of specialists in the field of labor protection.</p> <p>Our goal is to encourage discussion of occupational safety and health issues in the workplace. In an open dialogue we will discuss how each of us has met this challenge and what lessons we have learned.</p>
2	12.05.2021	Environment & Sustainable Development	ESG-ratings	<p>The trend of sustainable business development causes the development of various tools. These instruments are created with consideration of social, environmental and economic aspects. Thus, in order to demonstrate an effective management system and to assess the company's capabilities and risks for the long term, international rating system have been developed.</p> <p>Such ratings can be used to select partners and attract investments. As a result, the safety of the company's activities for the environment and people becomes one of the key factors of business development and this should be taken into account in the strategic planning of the company. Thus, in addition to external interaction, ratings can be useful for internal benchmarking and decision-making.</p> <p>We invite to join our discussion. The participants will talk about the importance of using such tool as the ESG rating in the strategic development of the company and the role of occupational safety in this context. The foresight session will also cover the organization of production processes and environmental protection within the enterprise, as well as the opportunity for companies to share their relevant experience.</p>
4	25.05.2021	Human Capital	Female power: female role in the HSE management development	<p>The round table is a great opportunity to get to know women leaders in the field of occupational health and safety.</p> <p>Given that women make up less than 30 percent of HSE professionals, the thematic round table is a way to draw attention to the success stories of women in occupational health and safety.</p> <p>We invited female recognized leaders in the field to share their experience. They will tell about the path that each of them had to go through before achieving success.</p>

June 2021

#	Date	Track	Topic	Description
1	02.06.2021	Safety & Risk Management	Influencer interview (Safety and Risk Management. Subject to be confirmed)	<p>The invited experts are recognized leaders in the field of occupational safety and health.</p> <p>You will get a unique opportunity to hear answers to the most relevant questions on the Vision Zero agenda, as well as personally communicate with leading international experts.</p>
2	08.06.2021	Health & Culture of Well-Being	Burnout at work. The effects of fatigue and stress	<p>Treatment of staff plays an important role in the company's image and corporate culture. It is impossible to fully eliminate stress in the workplace. However, this does not mean that the company should not take any measures to manage stress.</p> <p>With reduced stress levels, employees will be happier and more positive. Maintaining a strong, healthy workplace culture promotes creativity and high productivity.</p> <p>During the session, participants will share successful stress management practices. Together with experts we will consider the causes of the burnout syndrome, as well as various tools to prevent it.</p>
3	15.06.2021	Human Capital	Continuing employee training as an investment in a safety culture	<p>The employer is extremely interested in avoiding large costs related to accidents at work. In this case, it is the labor protection specialists who should act as a motivator, a leader of changes in their company.</p> <p>During the session, we will discuss what tools are available to specialists for daily training of employees. We will consider the relevance of ensuring a continuous education cycle. We will pay special attention to the importance of the perception of the proposed tools by employees. Because in this area it is impossible to stay formal.</p> <p>Our goal is to build a dialogue in which all parties can speak out, identify effective elements of training that will ultimately contribute to improving the safety culture.</p>
4	22.06.2021	Global Dialogue	Pioneer's time: success stories of the companies supporting Vision Zero	<p>It's never easy to be a pioneer, but at the same time it is incredibly exciting to stand at the origins. The Vision Zero concept is not yet many years old, but there are already companies on the world stage that are successfully implementing its principles.</p> <p>We invite business leaders and top managers of companies that stayed at the origins of the implementation of Vision Zero in the workflow. They will share their experience and knowledge. They will tell you what pitfalls are encountered on the way, how they can be avoided, what it costs to be a pioneer and what are the prospects.</p>

July 2021

#	Date	Track	Topic	Description
---	------	-------	-------	-------------

1	06.07.2021	Human Capital	Personal example: the executive role in popularizing the concept of zero harm	<p>Your values define your occupational health and safety practices. Your setups and beliefs determine both your own behavior and your reaction when you evaluate the actions of employees at the workplace. All of this sends a powerful message to employees of how seriously they should treat risks.</p> <p>Health and safety values and the ongoing behavior set the tone for the overall health and safety policy of the business. These are your values that ultimately determine the company's health and safety culture.</p> <p>Invited experts, recognized leaders in the field of occupational safety and health, will share their experience in implementing Vision Zero concept in the corporate environment. Their stories will help to understand how personal example can motivate employees to comply with the rules to ensure a safe working environment.</p>
2	13.07.2021	Safety & Risk Management	Risk management. Practical aspects of implementation	<p>Risks are an inevitable part of any production process. The goal of risk management is to minimize potential negative consequences.</p> <p>During the session, international experts from various industries and areas will discuss the changes in the tasks and functionality of the risk management system. Different methods and approaches to risk management in different countries will also be presented.</p> <p>Participants will have the opportunity to exchange experience, as well as get practical recommendations on the development of a modern, reliable and efficient system.</p>
3	20.07.2021	Health & Culture of Well-Being	Influencer interview (Health & Culture of Well-Being. Subject to be confirmed)	<p>The invited experts are recognized leaders in the field of occupational safety and health.</p> <p>You will get a unique opportunity to hear answers to the most relevant questions on the Vision Zero agenda, as well as personally communicate with leading international experts.</p>

August 2021

#	Date	Track	Topic	Description
1	10.08.2021	Safety & Risk Management	Emergency response	<p>Experience is the best teacher. Every company, every expert in the field of labor protection has many years of experience in solving difficult situations. All this allows them to imagine the range of dangerous situations that may arise and to develop complex scenarios for the actions of the company's emergency response services.</p> <p>Experts will simulate real-world situations and talk about strategies and tactics: what kind of services for internal response and decision-making mechanisms exist within the organization, what measures need to be taken to ensure that no one is injured.</p>
2	17.08.2021	Environment & Sustainable Development	Influencer interview (Environment & Sustainable Development. Subject to be confirmed)	<p>The invited experts are recognized leaders in the field of occupational safety and health.</p> <p>You will get a unique opportunity to hear answers to the most relevant questions on the Vision Zero agenda, as well as personally communicate with leading international experts.</p>
3	31.08.2021	Digital Transformation	AI saves lives	<p>Imagine a situation: You are standing on a cliff with a colleague, in a split second the brain analyzes thousands of micro-movements and gives the command to put out your hand to hold your friend after he or she stumbled. Now the computer can do this systematically and flawlessly, repeating this operation again and again.</p> <p>The concept of "AI" (Artificial Intelligence) has become a term that is widely used by scientists, politicians, and businessmen. It is appropriate to use this term in almost any conversation.</p> <p>At the session, together with experts, we will analyze what "Artificial Intelligence" is, how we can apply this technology/science to ensure safe working conditions, save the lives of employees.</p>

September 2021

#	Date	Track	Topic	Description
2	14.09.2021	Digital Transformation	Wearable devices: not just an accessory	<p>The future belongs to wearable devices. All of us have ever used smart watches, bracelets, calorie counters, etc. Every day we come across one or another type of smart wearable device, use it as a technological accessory or for entertainment. Today high technologies are available to everyone, they simplify many life processes.</p> <p>Let's now imagine how you can use all this arsenal in production, in the organization of labor protection. What will happen if we use smart wearable device technologies to reduce employee injuries, implement them to improve safety and reduce the risk of accidents. We have thousands of sensors at our disposal that can work in a single ecosystem, performing continuous monitoring functions.</p> <p>During the round table, we will look at all available types of such devices that can already be used on a production scale, get acquainted with the possibilities of their application and find out what tasks they solve. The invited experts will share best practices of successful implementation of high technologies in production processes.</p>
3	28.09.2021	Global Dialogue	Influencer interview (Global Dialogue. Subject to be confirmed)	<p>The invited experts are recognized leaders in the field of occupational safety and health.</p> <p>You will get a unique opportunity to hear answers to the most relevant questions on the Vision Zero agenda, as well as personally communicate with leading international experts.</p>

October 2021

#	Date	Track	Topic	Description
1	05.10.2021	Health & Culture of Well-Being	Prevention of air-borne infections	<p>A pandemic is a global outbreak of a disease that can be caused by a variety of agents, including influenza and coronaviruses. However we should not forget about seasonal infectious diseases.</p> <p>The transmission can occur in the workplace, not only from patients to health care workers, but also between colleagues, members of the general public and workers in other types of workplaces.</p> <p>All this requires a special attitude to the organization of work and working premises equipment.</p> <p>During the practical session, we will consider the importance of an integrated approach to the microbiological protection of personnel: organizational, technical and technological methods of protection in the workplace.</p>

2	12.10.2021	Human Capital	HSE Super Team	<p>Good teamwork is essential for high efficiency in any business. Good teamwork creates synergy — when the cumulative effect of the team is greater than the derivative of individual effort. Working together, a team can apply individual perspectives, experiences, and skills to solve complex problems, creating new solutions and ideas that may be beyond the capabilities of any individual. Good teamwork provides mutual support and learning, and can generate a sense of belonging and commitment.</p> <p>The implementation of Vision Zero is not an exception. The HSE team is the most important thing, all other processes are built around it.</p> <p>During the session, experts will discuss the details and subtleties of finding and selecting key team members and their training. We will learn how to build communication effectively, what methods of retaining and adapting new candidates in the company can be used. The speakers of the session will answer the key issues on the Human Capital track agenda, as well as talk about practical tools for HR management of HSE teams.</p>
3	19.10.2021	Digital Transformation	UAVs: corporate air fleet	<p>As technology continues to evolve and play an increasingly important role in the lives of modern people, business industries are also transforming and adapting. Today many companies already have huge fleets of drones to perform various tasks. In some companies the number of drones is even greater than the corporate fleet of cars.</p> <p>Unmanned aerial vehicles (UAVs) can easily and effectively access hard-to-reach locations, objects located at high altitude and in potentially toxic areas, thereby reducing the impact of potential risks on employees.</p> <p>We will talk with leaders and leading experts in the field of new technologies about the latest UAV technologies and how they help to ensure safety at work.</p>

November 2021

#	Date	Track	Topic	Description
1	02.11.2021	Environment & Sustainable Development	Prevention of environmental disasters	<p>The COVID pandemic happened unexpectedly for the whole world, companies and their employees faced a huge number of problems, the solution of which required time and sacrifices. The same thing will happen if any other global environmental disaster occurs.</p> <p>Assessment of the state of preparedness for the expected disaster, the actual response to the onset of a cataclysm, measures for recovery after a disaster — all these stages require coordination of actions of all participants.</p> <p>The session is devoted to the discussion of tactics and strategies for the development of companies if the environmental disaster occurs. What tools do we have today to act proactively at the preparatory stages and effectively organize work to eliminate negative consequences in case of an emergency? What innovative solutions to problems exist today that can significantly reduce the negative impact?</p> <p>The paradox of disaster preparedness is that it covers everything except what actually happens. We must be prepared enough to meet any unforeseen disaster.</p>
2	09.11.2021	Global Dialogue	Multinational companies: a unified approach	<p>International companies with branches all over the world are an example of a successful business. However, geographical expansion entails the emergence of a number of new problems that require close attention.</p> <p>Rules and regulations that apply in one country may not apply in the other state where the business operates. It is extremely important to assess the problems of compliance with the requirements of local legislation, to balance the company's corporate standards with national regulation.</p> <p>The participants of the global dialogue will discuss important issues that need to be kept in focus by international business when developing new territories. Experts will tell how to build effective cross-cultural communication processes, offer instructions for standardizing business and working processes within the company.</p>
3	16.11.2021	Health & Culture of Well-Being	Telemedicine: trend or new reality?	<p>Today intelligent solutions are being implemented increasingly in the field of occupational safety. This process increases safety at the workplace and turns it into a well-controlled process.</p> <p>As part of the dialogue, we will analyze what the modern online medicine market is: what types of services exist, and what areas are most popular and in demand. Experts will help to understand whether telemedicine is a temporary trend or a better and easier way to organize medical support for employees.</p>
4	30.11.2021	Digital Transformation	IIoT: monitoring systems	<p>A smart vacuum cleaner, a toothbrush, a remote switch-on system for household appliances, and other devices are common components of a modern home. It's time to include smart sensors and other smart devices into work areas and production sites. To ensure a safe working environment, the most important aspect is the availability of the necessary data at the time when it is needed. Traditionally, we spend a large amount of working time collecting, processing and analyzing information.</p> <p>The industrial Internet of Things allows to automate the entire cycle. The data is available always and immediately, after processing and analyzing key indicators. Online monitoring systems allow us not to perform routine work, but concentrate on building hypotheses, testing theories and implementing various solutions to improve working conditions.</p> <p>During the session our task is to show the best practices. Invited experts will share their experience and discuss possible tools for implementing smart technologies in production processes.</p>

December 2021

#	Date	Track	Topic	Description
1	07.12.2021	Safety & Risk Management	Advanced and effective PPE: latest trends	<p>"Personal protective equipment" (PPE) — until recently, this phrase could be heard only in specialized industries, harmful and even dangerous for employees. However, the events of 2020 have also made their own adjustments in this area. Medical masks and gloves in public places have become an integral part of our everyday life.</p> <p>In addition to expanding the scope of application, PPE itself is also evolving. Now the global PPE market is preparing to make a new technological leap that will change our perception. The concept of smart applications, which connect PPE with the Internet and allows to transfer a lot of data, is already becoming a reality.</p> <p>We invite participants to discuss innovations and trends in the PPE market; to consider the key factors of implementation and ensuring the work processes.</p>
2	14.12.2021	Human Capital	Staff training in "imperfect" conditions	<p>Not all employees of the company work centrally, in one place. Due to objective reasons, very often branches of companies are located in hard-to-reach places. In this regard, effective models of distance learning and online support are needed for continuing operational training and professional development of specialists in remote areas.</p> <p>During the event, companies that are faced with the problem of remote or "inconvenient" location of branches and divisions will talk about their experience in implementing distance learning practices.</p>

3	21.12.2021	Digital Transformation	Big Data	<p>Traditionally, HSE departments work with a large amount of information: working conditions for each workplace, hazards, risks, the results of knowledge tests for employees, and much more.</p> <p>All this data is updated every day, at every facility of the enterprise, in every region, and is represented in a large array of information. It is no longer feasible to analyze data in traditional ways, such as using Excel or other manual techniques. The only sustainable approach that gives a stable and accurate result is to use complex automation and integrated systems. In short, we need to collect all the data necessary for processing and prepare reports in real time.</p> <p>Today our task is to build these processes at a completely new level, when you can quickly and reliably draw thousands of connections between different types of data and get more workable indicators. All this will allow us to achieve high efficiency in decision-making.</p>
---	------------	------------------------	-----------------	--

January 2022

#	Date	Track	Topic	Description
1	18.01.2022	Environment & Sustainable Development	Effective waste management	<p>Waste management is one of the important issues of environmental policy. Poor waste management can lead to various environmental problems. The importance of integrating different participants requires a serious approach to its application in order to create a good and sustainable system.</p> <p>Today it is important to unite international efforts in the search for optimal solutions to reduce the negative impact on the environment.</p> <p>Join us at the event dedicated to waste management, participate in the discussion and search for safe and cost-effective solutions in the field of waste management and disposal.</p>
2	25.01.2022	Safety&Risk Management	Root causes of industrial accidents	<p>Everything has its own reason, its own prerequisites. An accident is the result of a series of events and actions. It is impossible to deal with the problem without identifying its root causes.</p> <p>We are deeply convinced that the global experience exchange will expand the scope of existing tools for identifying the root causes of accidents and will help to comprehensively approach the effective prevention of dangerous accidents at work.</p> <p>Within the framework of the thematic round table, experts will discuss how important it is to investigate the accident and find its root causes. Participants will get to know different approaches to identify root causes, so that they could later use new techniques in organizing safe working conditions.</p>

February 2022

#	Date	Track	Topic	Description
1	01.02.2022	Human Capital	Gamification in HSE	<p>Business games, gamification and gaming technologies are no longer just a trend, but a modern effective tool for staff training. The use of gaming technologies in the field of labor protection and industrial safety, where the formal nature of training has historically developed due to its obligation and frequency, is becoming especially relevant. Ignorance and poor quality of training and implementation of knowledge are the main reasons for safety rules violations. As a result the number of injuries at enterprises increase.</p> <p>Game forms of training have a significant impact on the effectiveness of employee training, allow to improve the involvement and motivation of the participants.</p> <p>Within the the discussion, experts, game practitioners and representatives of leading companies, will discuss the most successful practices of using game approaches in the field of occupational safety and health.</p>
2	08.02.2022	Safety & Risk Management	Results of the transition to ISO 45001: 2018	<p>On March 12, 2018, the long-awaited ISO 45001 was released. This event has marked the end of more than four and a half years of development cycle. Recognizing the importance and far-reaching implications of the new standard, occupational safety experts and industry organizations responded positively.</p> <p>The security requirements and protocol vary by industry and work site. One of the advantages of the ISO 45001 standard is that it is flexible enough to be implemented in almost any organization.</p> <p>We invite participants to share their experience, how the transition and certification under the new standards took place, and what are its advantages for particular industries. Experts will discuss what difficulties companies face when implementing and using the standard.</p>
2	15.02.2022	Health & Culture of Well-Being	A Matter of Life: first aid skills	<p>We believe that first aid should be the main life skill of employees. Anyone may need help when performing dangerous jobs or routine duties. However, it is not enough to hold one webinar. Knowledge of first aid should be regularly reinforced by practice and training.</p> <p>We will discuss how to effectively organize training and how to motivate employees to practice first aid skills with leading experts during the session.</p>

March 2022

#	Date	Track	Topic	Description
1	01.03.2022	Human Capital	Psychology - an effective approach to working with the team	<p>Many companies spend significant time and resources to improve safety, usually by addressing technical, environmental, and procedural issues and implementing safety management systems. However, what happens when productivity declines and minor crashes continue to occur? How can we foresee the incidents? How can we prevent those minor incidents that are often attributed to negligence or inattention?</p> <p>This is where the psychology of safety comes to the forefront. After all, when forming a team, the human factor, the personality of employees plays an important role. Companies face different levels of awareness among workers. This also applies to the safety rules attitude.</p> <p>During the event we will learn from experts how to create a "portrait" of safety from a scientific point of view, consider effective methods of personnel diagnostics that can be used in the selection and evaluation of the team and investigate the approaches to the formation of awareness of safety issues.</p>

2	15.03.2022	Digital Transformation	Virtual workspace and autonomous technologies	<p>The reality of modern business is that: more and more processes are executed remotely, and significant parts of the workforce are switching to remote work. Many companies, especially manufacturing industries, are located in remote areas. The company's activities can be carried out from anywhere in the world, at any time of the day - all this creates new challenges for the organization of optimal work process.</p> <p>How to ensure safety in a world where everything is so accessible and remote at the same time?</p> <p>However, we should not be pessimistic about such changings. In addition to the challenges, new opportunities also arise. A modern company has a huge number of options available for organizing dangerous works independently and remotely. Like movie heroes who fly drones, employees can operate large-scale equipment at coal mines from the head office. These technologies have a huge potential, the most important is the ability to protect people from deadly dangers, which is the direct way to achieve the goal of zero harm!</p> <p>At the thematic session, developers of such solutions, so as the companies that are already implementing autonomous workplaces, will talk about their experiences, new opportunities they met and difficulties they overcame.</p>
3	22.03.2022	Safety & Risk Management	Audit. Best practices	<p>The one who owns the information, keeps under control the organizational and production processes in the company. The main task of the audit is to systematically and regularly (once a month, every quarter, etc.) present real data on the current situation at the workplace. Thus, it becomes possible to take effective measures in a timely manner and change the existing order within the company. An audit is not a formality, it is much more than just a standard procedure. It is the regular audit that is the main aspect of the PDCA approach.</p> <p>There are three components we need:</p> <ol style="list-style-type: none"> 1. a trained team of auditors 2. a well-structured systematic audit process 3. staff with a strong understanding that the purpose of the audit is to protect their health and safety, and not an event designed to identify and punish violators. <p>This synergy will allow us to form an objective picture of the current state of occupational safety and health.</p>
